

Attorney General Chris Koster

Jim Farnsworth 573-751-8807

Neosho, MO

Yes in concept. Need time to work schedule and see what's possible.

Army Corps of Engineers

Kansas City District

Col Andrew D. Sexton

Public Affairs 816-389-3486, Dave Kolarik

St. Louis District Col

Col Christopher Hall

Public Affairs 314-331-8002, Mike Peterson

Event Concept:

- 

The U.S. Army Corps of Engineers has an expression: "One Team, One Fight." That's a principle we live by when it comes to the West Lake Landfill Site. EPA, the St. Louis area Congressional delegation and the Missouri Attorney General are in agreement that this site requires a team of the best people. This is why I have been in discussions with the Army Corps to enlist their construction management expertise for the isolation barrier to separate the Radiologically Impacted Material from the subsurface smoldering event at Bridgeton Landfill. I'm hopeful construction on the isolation barrier can begin shortly.

Attorney General Chris Koster's letter highlights that shared commitment to protect public health, and we are working to ensure continued close collaboration at the site between the state and federal partners. The complementary regulatory authorities held by the State and EPA will continue to hold the responsible parties to their duties.

EPA's legal authority under Superfund provides the authority to compel the potentially responsible parties to take the actions that are required to protect public health. What's more, EPA has the responsibility to protect the public no matter where the RIM, resulting from the disposal of leached barium sulfate, may be located at the site.

We will continue to share new information on our progress as our plans come together.
